

Web Programming Step by Step

Lecture 28

What's Next?

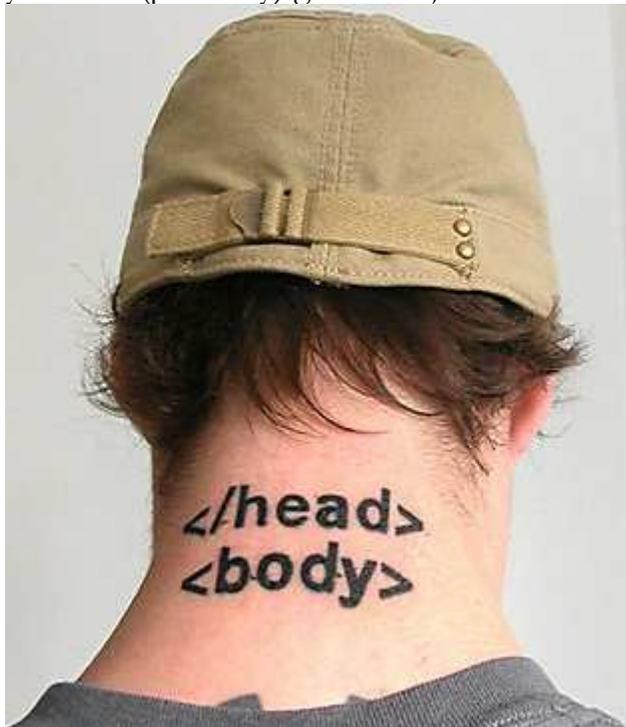

Reading: Ch. 13

Except where otherwise noted, the contents of this presentation are Copyright 2009 Marty Stepp, Jessica Miller, and Alex Loddengaard.

We've come so far...

- web programming is now in your blood
- you now (probably) get these jokes:

DELETE COOKIES?!

gegen-den-strich.com

FERNANDEZ

Sharing your work with others

- show off your awesome programs to your friends!
- put your web dev skillz (and links to your programs) on your resume!
- [set up your Dante web space](#)
- your UW web site will be at `http://students.washington.edu/YOUR_UWNETID`
- put this line at the top of your PHP code:

```
<?php
error_reporting(E_ALL);    # makes dante show error messages
...
```

PHP

Protecting web resources

- please don't post your HW solutions on the web unprotected!
(we want to be able to assign some of these programs again)
- posting resources with a shared password:
 - create files named `.htaccess` and `.htpasswd` with proper contents and put them in your HW root folder on Dante
 - doesn't require a UW NetID
 - can give password to friends / family / employers

Example htaccess, htpasswd files

.htaccess:

```
AuthUserFile .htpasswd
AuthGroupFile /dev/null
AuthName EnterPassword
AuthType Basic
require user USERNAME
```

.htpasswd:

```
USERNAME:ENCRYPTEDPASSWORD
```

- place these files in the top folder of the content you want to protect
- [htpasswd generator](#) (gives you the text to copy-paste into your .htpasswd file)

Getting Ajax to work

- Ajax (XMLHttpRequest, Ajax.Request) can only connect to the same server as where your .html and .js files are located
- If you put your work up on Dante, your Ajax code will be unable to reach Webster!
- Solution: Put [proxy.php](#) in the same folder as your Dante code, and change any Ajax URLs
 - from: `http://webster.cs.washington.edu/dir/file.ext`
 - to: `proxy.php?url=http://webster.cs.washington.edu/dir/file.ext`

MySQL on dante

- [How to install MySQL on Dante](#)
- download our databases: [simpsons.sql](#), [world.sql](#), [imdb_small.sql](#), [imdb.sql](#)
- importing a database into MySQL from a file:
 - upload one of the above `.sql` files to your Dante space
 - open an SSH terminal window on Dante and type:

```
mysql -u username -p databaseName < filename.sql
```

- exporting a database from MySQL to a `.sql` file:

```
mysqldump -u username -p databaseName > filename.sql
```

Setting up your own web server

- why?
 - test your web apps locally without needing to upload them to Dante
 - host your own projects from your house and connect to them
 - other useful services: SSH, VNC, SMB (Samba), CVS, ...
- how?
 - Linux: [Ubuntu \(LAMP\) server tutorial](#)
 - Windows: [Apache \(WAMP\) tutorial](#); [IIS tutorial](#)

Revisiting past homework assignments

- extensions to the assignments from this course:
 - HW1,2: Pick other web sites and try to mimic them
 - HW4: implement persistent data, uploading of images, a login system
 - HW5: rewrite the `gallery.js` functionality yourself using Ajax
 - HW6: use Scriptaculous to add effects and animate the movement of the tiles
 - HW7: write the PHP that reads `names.txt` and feeds XML to client
 - HW9: implement the real 6 degrees of Kevin Bacon as seen at [oracleofbacon](#)
- make your assignments compatible w/ IE6, Opera, Safari, etc.
- complete the extra features you didn't have time for during the quarter
- go back and look at the Ruby lecture notes; try some of the programs

Further Learning

- [Yahoo! web developer videos](#)
- more Javascript
 - learn to write classes/objects in Javascript (tutorial [#1](#), [#2](#))
 - learn other JS libraries such as [Google Ajax Search API](#) ([slides](#)), [Yahoo! UI](#), or [jQuery](#)
- topics we didn't have time to cover:
 - [Web design and usability](#)
 - [Going "live"](#), making a real web site with your own domain name
 - Embedding [multimedia content](#) (old HW assignment) ([resources](#))
 - Macromedia Flash: [tutorial 1](#), [tutorial 2](#), [tutorial 3](#)
- server-side web programming in Java
 - JSP / servlets ([#1](#), [#2](#))
 - applets ([#1](#), [#2](#))

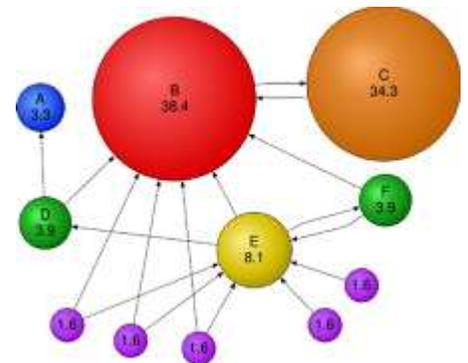

Courses you can/should take

- [CSE 143](#) - learn more about structuring data and algorithms (if you haven't taken it yet!)
- [CSE 403](#) - software engineering (large software projects)
- [CSE 490H](#) - distributed systems
- [CSE 498/499](#) - senior capstones and project courses
- [INFO 343/344](#) - web design, web tools/development
- [ENTRE 475/476](#) - business aspects of web development

Taking a web site "live"

- buy your own domain name (e.g. [martystepp.com](#)):
[DreamHost](#)
- learn about (stalk) your users with [Google Analytics](#)

Top search queries	Average top position
1. cellarspot	1
2. henri boillot	11
3. bossi siena	1
4. les charmes chardonnay	2

- improve your page / improve PageRank: [SEO](#), meta tags
- make a few bucks with ads: [Google AdSense](#)
- get the word out: [Google AdWords](#), [Webmaster Tools](#)

Ads by Google
